Private Community

Aspen, Colorado

Owners of a beautiful ranch property near Aspen, CO elected to treat their wastewater using multiple AdvanTex® Treatment Systems to protect their pristine environment.

Due to the layout of the development, cluster systems are fed by septic tank effluent pumping (STEP) systems used throughout the ranch property.

At final build-out, at least five treatment systems will serve the community.

For each system, septic tank effluent is dosed to a recirculation tank. The septic tank effluent is then circulated through multiple AX20 filter units for treatment.

Once the wastewater has been treated, it is dosed to zones of a shallow drip irrigation system using a series of distribution valves.

Dedicated to Improving the Performance of Onsite Wastewater Systems
